

Grow a Bean in a bag

Materials:

- A plastic ziploc baggie
- One paper towel
- A few bean seeds

Procedure:

1. First, fold up the paper towel so that it fits easily inside the plastic baggie.
2. Then, get the paper towel wet and slip it into the baggie.
3. Next, place a few dry beans inside the baggie right on top of the paper towel.
4. Finally, seal the plastic baggie shut and set it on the counter near a window for observation, (or tape it to the window) and leave it there for couple of weeks.
5. Check your growing beans every day to see how they are changing!
