

Assessment

Students receive a final grade through:

- Journal entries
- Participation
- A group project

Students will be exploring the different elements of outdoor education, and recording journal entries as they go through the process. To conclude the class, they will be tasked with creating a visual project that connects the skills and knowledge they learned in the course.

Outdoor Education

Grades 7 & 8

The purpose of the outdoor education program is to expose students to survival skills, activities, and experiences in outdoors settings. Students will learn a combination of land-based and western approaches to outdoor education.

Activities

Orienteering

Archery

Survival Skills

Geocaching

Land-Based Learning

At General Wolfe School, we recognize the importance of incorporating Indigenous perspectives and we create opportunities to integrate them seamlessly into our curriculum. In outdoor education, we will explore some land based teachings that are central to the Manitoba area.

Experiential Learning

The course will use a teaching strategy called experiential learning where students will learn by participating in activities and continually reflecting on the activities they complete throughout the course.
